THE UNITED STATES INTERNATIONAL TRADE COMMISSION

In the Matter of:)
CERTAIN POLYESTER STAPLE) Investigation No.:
FIBER FROM CHINA) 731-TA-1104
(Preliminary)

Friday,
July 14, 2006

Room No. 101
U.S. International
Trade Commission
500 E Street, S.W.
Washington, D.C.

The preliminary conference commenced, pursuant to notice, at 9:30 a.m., at the United States International Trade Commission, ROBERT CARPENTER, Director of Investigations, presiding.

APPEARANCES :

On behalf of the International Trade Commission:

Staff:

ROBERT CARPENTER, DIRECTOR OF INVESTIGATIONS
DIANE MAZUR, SUPERVISORY INVESTIGATOR
JEREMY WISE, INVESTIGATOR
CHARLES ST. CHARLES, ATTORNEY ADVISOR
JOHN BENEDETTO, ECONOMIST
CHARLES YOST, AUDITOR
JEFF CLERK, INDUSTRY ANALYST

APPEARANCES: (cont'd.)

In Support of the Imposition of Antidumping Duties:

On behalf of DAK Americas LLC, Nan Ya Plastics Corp.
America and Wellman Inc.:

JON MCNAULL, Fibers Business Director, DAK
Americas LLC
RICKY LANE, DAK Americas LLC
SCOTT BARFIELD, Senior Account Manager, Nan Ya
Plastics Corp.
MICHAEL BERMISH, Director, Investor Relations,
Wellman Inc.
PATRICK MAGRATH, Director, Georgetown Economic
Services
GINA BECK, Economist, Georgetown Economic
Services

PAUL C. ROSENTHAL, Esquire
KATHLEEN W. CANNON, Esquire
DAVID C. SMITH, JR., Esquire
Kelley Drye Collier Shannon
Washington, D.C.

In Opposition to the Imposition of Antidumping Duties:

On behalf of Cixi Jiangnan Chemical Fiber Co., Ltd.,
Jiaxing Fuda Chemical Fiber Co., Ltd., Ningbo Dafa
Chemical Co., Ltd. and Xiamen Xianglu Chemical Fiber
Co., Ltd.:

NED H. MARSHAK, Esquire
PAUL FIGUEROA, Esquire
Grunfeld, Desiderio, Lebowitz, Silverman &
Klestadt, LLP
Washington, D.C.

P R O C E E D I N G S

(9:30 a.m.)

MR. CARPENTER: Good morning and welcome to the United States International Trade Commission's conference in connection with the preliminary phase of antidumping investigation No. 731-TA-1104 concerning imports of Polyester Staple Fiber From China.

My name is Robert Carpenter. I'm the Commission's Director of Investigations, and I will preside at this conference. Among those present from the Commission staff are, from my far right, Diane Mazur, the supervisory investigator; Jeremy Wise, the investigator; on my left, Charles St. Charles, the attorney advisor; John Benedetto, the economist; Charles Yost, the auditor; and Jeff Clark, the industry analyst.

I'd also like to introduce two of our interns who have been working extensively on this case, Jason Pau from the Office of Investigations and Ioana Mic from the Office of Economics, sitting over there at the staff table.

I understand the parties are aware of the time allocations. I would remind speakers not to refer in your remarks to business proprietary information and to speak directly into the

1 microphones. We also ask you to state your name and
2 affiliation for the record before beginning your
3 presentation.

4 Are there any questions?

5 (No response.)

6 MR. CARPENTER: If not, welcome, Mr.
7 Rosenthal. Please proceed with your opening
8 statement.

9 MR. ROSENTHAL: Thank you. Good morning,
10 Mr. Carpenter and members of the Commission staff.
11 I'm Paul Rosenthal of the law firm Kelly Drye Collier
12 Shannon.

13 It's rare that an attorney gets to testify
14 before the Commission twice in six months on behalf of
15 the same industry. In fact, given the dearth of
16 antidumping cases lately I guess it's rare to have
17 attorneys before the Commission at all these days, but
18 my goal or my hope is that while a lack of attorney
19 appearances may be regarded as a mixed blessing, my
20 goal is still that the antidumping law, Title VII,
21 won't be listed on the endangered species list any
22 time soon. I expect you'll see more of us in the
23 coming months.

24 In January of this year I did testify before
25 the Commission, along with members of the domestic

1 polyester staple fiber industry, in an attempt to
2 prevent the revocation of antidumping duty orders on
3 imports of certain PSF or polyester staple fiber from
4 Korea and Taiwan.

5 Even though China was not subject to that
6 investigation, the impact of China on this market
7 figured prominently in the testimony in that case and
8 in the Commission's analysis and determination.
9 Despite a unanimous Commission decision that
10 revocation of the orders against Korea and Taiwan
11 would cause material injury to continue or recur,
12 maintaining those orders has not been sufficient to
13 prevent the domestic industry from suffering injury
14 from a new source of imports -- China.

15 The testimony you will hear today and the
16 record you are developing will show the following:
17 The surge in imports from China has been staggering.
18 Within a very short period of time, China has become
19 the largest source of PSF imports in the U.S. market.
20 Imports from China have increased since the beginning
21 of the period of investigation. The growth in China's
22 imports over one year in the period from 2004 to 2005
23 was an estimated 173 percent.

24 China more than doubled its market share
25 over this one year period at the direct expense of the

1 U.S. industry, and in interim 2006 imports from China
2 have continued to surge, increasing by an additional
3 97 percent from the high 2005 levels.

4 The growth in imports from China, like those
5 from Korea and Taiwan, has been accomplished by
6 unfairly low prices that undercut U.S. producer
7 prices. At a time of significant cost increases
8 experienced by the domestic industry over the past few
9 years, it is particularly difficult to compete against
10 unfairly priced competition.

11 The domestic PSF industry has reacted to
12 this competition in two ways, both of which are
13 clearly apparent in the record data. Last year, as
14 imports surged domestic producers attempted to
15 increase prices to cover the ever-increasing cost,
16 given that the prior two years of operating losses had
17 been extensive.

18 These price increases, however, came at the
19 direct expense of a loss of substantial market share
20 to subject imports in 2005, and even then the industry
21 was barely able to achieve break even profits.

22 In an effort to maintain customers, by 2006
23 the industry could not raise prices to cover increased
24 costs and again resulted in a rising tide of red ink.
25 The meager profits earned in 2005 dropped quickly in

1 interim 2006 to operating losses. To make matters
2 worse, the domestic industry's market share continued
3 to fall in interim 2006, while China's market share
4 increased even further.

5 There's no end in sight. China has rapidly
6 increased production of PSF in recent years, and
7 further capacity expansions are projected in the near
8 future even though capacity in China already exceeds
9 demand. In addition, Chinese PSF is subject to
10 antidumping restraints in one of its other major
11 markets, the EU.

12 Under these facts, imports from China will
13 continue to grow, devastating an already vulnerable
14 U.S. industry. Continued high levels of Chinese
15 imports at low prices will lead to further shutdowns
16 and layoffs at an already vulnerable domestic
17 industry.

18 If we're not able to obtain relief from
19 dumped Chinese imports here, I very much fear that
20 this may be the last time this industry appears before
21 the Commission. Thank you.

22 MR. CARPENTER: Thank you, Mr. Rosenthal.

23 Mr. Marshak?

24 MR. MARSHAK: Good morning. I'm Ned
25 Marshak.

1 MR. CARPENTER: Excuse me. Could you turn
2 on the microphone please and begin again?

3 MR. MARSHAK: Okay. I'm sorry.

4 MR. CARPENTER: Thank you.

5 MR. MARSHAK: I'll start again. Good
6 morning. I'm Ned Marshak of Grunfeld, Desiderio,
7 Lebowitz, Silverman & Klestadt, LLP. I appear here
8 today with Paul Figueroa on behalf of Chinese
9 Respondents.

10 Our presentation will be very brief. The
11 Commission and its staff have just recently examined
12 conditions of competition in the polyester staple
13 fiber industry through September 2005, and data for
14 the next six months, October 2005 through March 2006,
15 is confidential.

16 We believe that this data will confirm that
17 there is no correlation between the admittedly
18 significant increase in Chinese exports to the United
19 States and any difficulties which the domestic
20 industry currently is experiencing.

21 We also believe there is no threat. The
22 fact that the recent increase in Chinese imports did
23 not injure the domestic industry constitutes
24 substantial evidence that the Chinese do not pose a
25 threat to the industry in the future.

1 Chinese producers thank the Commission for
2 allowing us the opportunity to present our views. We
3 trust you recognize the difficulties this industry has
4 in presenting a complete defense to Petitioners'
5 allegations in the very short period of time in this
6 preliminary investigation.

7 We will do our best to provide the
8 Commission staff with any additional information you
9 request. Thank you.

10 MR. CARPENTER: Thank you, Mr. Marshak.

11 Mr. Rosenthal, you can bring your panel up
12 at this point.

13 MR. ROSENTHAL: Good morning again. We have
14 several industry witnesses here, and I want to get to
15 their testimony very promptly, but I just want to
16 mention that accompanying me this morning are my
17 colleagues, Kathleen Cannon and David Smith of the law
18 firm, and Pat Magrath and Gina Beck from Georgetown
19 Economic Services. You'll be hearing from Dr. Magrath
20 at great, if not excruciating, length later this
21 morning.

22 Our first witness this morning will be John
23 McNaull.

24 MR. MCNAULL: Good morning. My name is John
25 McNaull. I'm going to be representing DAK Americas

1 LLC. I'm the fibers business director for that
2 company.

3 Good morning, Mr. Carpenter and Commission
4 staff. Again, John McNaul1 representing DAK Americas.
5 I've been in the polyester staple fiber business for
6 approximately 13 years working in every aspect of the
7 business.

8 My responsibilities have included work as an
9 engineer in the manufacturing process, at technical
10 marketing, which is servicing our customers, sales and
11 supply chain management before assuming the role of
12 the fibers business director in May 2005.

13 I appeared before the Commission earlier
14 this year in the sunset review of polyester staple
15 fiber cases involving Korea and Taiwan. In discussing
16 our concerns with revocation of the orders against
17 Korea and Taiwan at that time I mentioned the rapid
18 increases we had seen in Chinese imports and
19 identified China as one of DAK's key competitive
20 problems.

21 Unfortunately, that situation has only
22 gotten worse following my testimony this past January,
23 causing us to file this case to seek relief from
24 dumped imports from China.

25 I would like to describe for you today some

1 key events that have transpired over the past three
2 years and into this year both at DAK and our industry
3 overall. DAK has had a number of organizational
4 changes over the period of investigation, cumulating
5 in the closure of a facility of our affiliated
6 company, Polykron, which is the polyester staple
7 facility located in Mexico, in July of 2005 in an
8 attempt to rebalance and improve capacity utilization
9 in our U.S. facilities. Before its closure, Polykron
10 also produced certain polyester staple fiber.

11 One key factor that's taken place over the
12 past few years that's important to the ITC analysis
13 has been the steady and significant increases in the
14 cost of producing our product. In addition to the raw
15 material cost increases that Mr. Bermish described,
16 although he hasn't described that yet -- I guess we'll
17 get to that -- substantial increases have occurred in
18 energy costs in recent years.

19 The production of polyester staple fiber is
20 an energy intensive business, so these cost increases
21 are also a significant factor to consider in analyzing
22 the market. The capital and energy intensive nature
23 of the polyester staple business makes it important
24 that polyester staple fiber producers maintain high
25 operating rates to maximize efficiencies. If we

1 cannot run these lines at optimal efficiency levels,
2 significant costs are incurred, and shutdowns are
3 often the only alternative.

4 One factor that has not been a problem for
5 our industry in recent years, however, is demand.
6 Unlike the general textile industry, demand for
7 certain PSF has been strong in recent years. The
8 industry's problem is not a lack of customers
9 purchasing the product. The problem is the imports
10 from China have captured an increasing share of U.S.
11 demand, preventing us from benefitting from the
12 healthy demand in our own market.

13 In describing recent events in our market, I
14 should also mention the hurricanes that occurred in
15 the fall of 2005. Immediately following Hurricanes
16 Katrina and Rita, supplies of critical raw materials
17 were tight and higher in price, leading to our
18 temporary imposition of raw material surcharges.

19 There were also some limited interruptions
20 to supply streams. DAK made every effort to minimize
21 these disruptions, and supply to our customers was not
22 affected. Importantly, this was a very short term
23 phenomenon. In January of this year things were back
24 to normal in terms of supply, and surcharges no longer
25 applied to the industry.

1 Surging imports from China that have been
2 observed in recent years, especially the first few
3 months of this year, are not due to needs brought on
4 by the hurricane. Important statistics indicate
5 imports from China have increased dramatically even
6 before the hurricanes occurred and have continued to
7 surge in 2006, even though domestic polyester staple
8 fiber producers have been able and willing to supply
9 domestic purchasers' needs.

10 The increases in imports from China have
11 been accompanied by China underselling. China sells
12 polyester staple fiber at prices that force us to
13 either lose sales and market share if we refuse to
14 match the low prices or cut our prices to meet Chinese
15 import prices and suffer the impact of financial
16 decline. This problem is compounded by the continued
17 cost increases we face.

18 When you look at our prices and see
19 increases last year, recognize that those increases
20 must be measured in comparison to our cost. Absolute
21 price increases are meaningless if not compared to
22 cost.

23 The key issue to domestic producers is the
24 relationship between the two and the ability to
25 maintain a reasonable margin of prices above cost. We

1 have not been able to do that due to the dumped
2 Chinese imports.

3 In the fiberfill market, the principal
4 factor driving purchasing decisions is price.
5 Customers are constantly comparing price, seeking to
6 purchase from the lowest priced source. Chinese
7 producers and importers have used low dumped prices to
8 become the largest import supply source for PSF in our
9 home market today, surpassing both Korea and Taiwan.

10 It is our firm belief that imports from
11 China, if left unchecked, will cause a partial or
12 complete shutdown of DAK's production capacity, as
13 well as termination of employment for hundreds of
14 workers. We simply cannot survive as an industry when
15 we suffer continuous losses or only minimal profits
16 and cede market share to unfair traded imports first
17 from Korea and Taiwan and now from China.

18 We respectfully request the Commission find
19 that imports from China are causing injury to our
20 industry so that duties may be put in place to offset
21 their unfair trading practice.

22 Thank you very much.

23 MR. ROSENTHAL: The next witness will be
24 Michael Bermish from Wellman.

25 MR. BERMISH: Good morning. My name is

1 Michael Bermish, and I am Director of Strategic
2 Planning, as well as the Investor Relations Officer,
3 at Wellman, Inc. I have been with Wellman for 17
4 years and have been involved in the fibers business
5 for 22 years.

6 Wellman is the largest U.S. producer of
7 certain polyester staple fiber. We participated as
8 Petitioners in the original investigation and in the
9 recent sunset review of dumped imports of polyester
10 staple fiber from Korea and Taiwan.

11 Although we were successful in obtaining
12 orders against imports from these two countries and in
13 keeping those orders in place during the sunset
14 review, the successful outcome of that case has not
15 permitted our industry to recover. The reason is
16 surging volumes of dumped imports from China.

17 The rapidly increasing volumes of imports
18 from China at low dumped prices have caused the
19 domestic industry, including Wellman, to lose sales,
20 to reduce prices and to suffer financially in an
21 effort to compete with unfairly traded imports.

22 Because the Commission recently conducted
23 the sunset review of the Korean and Taiwanese orders,
24 I know you are generally familiar with our product and
25 our market. Let me review some key issues that were

1 examined in that earlier case that apply as well here,
2 in addition to providing you with some updates and
3 specifics as to China.

4 In terms of the products, certain polyester
5 staple fiber is a fairly basic product used primarily
6 as fiber for fill in furniture, bedding and sleeping
7 bags, among other things. Whether imported from China
8 or produced in the United States, polyester staple
9 fiber has the same physical characteristics and end
10 uses and competes directly for sales.

11 It also does not matter whether the fiber is
12 made from virgin raw materials or from recycled raw
13 materials. Wellman produces products from both types
14 of inputs, and customers do not request a product
15 based on the input needed.

16 Major virgin inputs to our production of
17 polyester staple fiber are PTA, purified terephthalate
18 acid, and MEG, monoethylene glycol. Raw material
19 inputs for non-virgin staple fiber include fiber
20 waste, filament waste, popcorn chips, recycled PET
21 bottles, polyester lumps and off-grade chip. Where
22 non-virgin inputs are concerned, the Commission should
23 recognize that U.S. producers and Chinese producers
24 use the same types of raw material inputs.

25 Indeed, Chinese producers of staple fiber

1 have been purchasing large quantities of U.S. recycled
2 PET bottles in recent years to use in making fiber for
3 fill in China. The terms recycled and regenerated
4 inputs are synonymous, as the Commission recognized in
5 the Korea and Taiwanese case and recent sunset review.

6 Purchasers of polyester staple fiber examine
7 physical characteristics such as denier, cross-
8 section, fiber length, finish, the specifications
9 listed on our invoices and on our packages. There is
10 no indication of raw materials used.

11 While the raw materials used do not
12 differentiate the end product or its use, they do
13 affect the cost of the product. At Wellman, because
14 we produce both virgin and non-virgin materials, we
15 are well situated to optimize our costs if the input
16 costs vary.

17 Over the past several years, however, the
18 cost to produce staple fiber from both virgin and
19 non-virgin material have increased substantially.
20 Both the virgin raw material input costs, PTA and MEG,
21 and the non-virgin input costs in the various recycled
22 inputs have escalated. Rapidly rising energy costs
23 also inflate total cost to producing polyester staple
24 fiber, regardless of the inputs used.

25 These rapidly rising production costs,

1 coupled with an influx of low-priced imports, have
2 placed the domestic industry in a cost/price squeeze.
3 Although the industry has increased prices, the
4 increased prices have not been sufficient to keep pace
5 with the increased cost, hurting us financially.
6 Increased prices are not a sign of health when they do
7 not cover the increased cost or permit any reasonable
8 profit earnings.

9 In this regard I should also mention price
10 increase announcements. Price increase announcements
11 were the subject of much discussion in the recent
12 Korea/Taiwan sunset review. During the period of
13 investigation there have been a number of price
14 increase announcements by industry members, including
15 Wellman, in response to these rising costs.

16 Two things are important to remember about
17 these announcements, however. First, the price
18 increase announcements are always followed by
19 individual negotiations with each customer, so the
20 announcement alone is not an indication of whether or
21 the extent to which a price increase occurred in the
22 market. At times, many of our customers simply have
23 not agreed to accept the higher prices, so numerous
24 price increases have been unsuccessful in the past.

25 Second, the price increase announcements in

1 this industry are generally for all staple fiber
2 products and not specific to subject polyester staple
3 fiber. Increases may occur in prices of other staple
4 fiber products that are very different from certain
5 polyester staple fiber. The reason we are not able to
6 increase price sufficiently on certain polyester
7 staple fiber is the low prices and large volumes of
8 dumped imports from China.

9 Based on the information available to us on
10 China's capacity and production of certain polyester
11 staple fiber, the problem is only going to get worse.
12 We submitted data in confidence to the Commission in
13 General Exhibit 2 to our petition identifying the many
14 producers of polyester staple in China and the massive
15 capacity levels of these producers. That exhibit also
16 shows a forecast of future capacity, which is
17 continuing to grow over the next few years.

18 Additional information that we will submit
19 in our postconference brief shows that current and
20 projected capacity levels far exceed demand for staple
21 fiber in China. As a result, China has and will
22 continue to rapidly increase its export of polyester
23 staple fiber. The United States is a prime target
24 market for these exports, all at the expense of U.S.
25 producers like Wellman, which will be unable to supply

1 our own market.

2 In the past several years, our industry has
3 experienced a continuous struggle with unfairly traded
4 imports. At Wellman, we undertook a number of cost
5 cutting measures in the fall of 2003 in an attempt to
6 be as competitive as possible with imports in the
7 market.

8 Despite these measures, Wellman was forced
9 to shut down just last year a substantial part of its
10 Johnsonville facility producing certain polyester
11 staple fiber. This shutdown included a significant
12 workforce reduction. We hated to see these workers
13 terminated, but we had no choice.

14 Due to import competition, we find ourselves
15 in a constant battle between trying to maintain our
16 sales at the risk of lowering prices and sacrificing
17 profits or trying to maintain prices and profits at
18 the risk of losing sales.

19 If you look at the industry trade and
20 financial data over the past few years, you will see
21 that we have lost market share in some years, seen our
22 bottom line deteriorate in others and, most recently
23 in 2006, suffered declines in both market share and in
24 profits.

25 Wellman has stated publicly that if negative

1 cash flow continues to this industry it may be forced
2 to shut down the remaining capacity of certain
3 polyester staple fiber operations at our Johnsonville
4 facility. We are hoping that we are instead able to
5 restore fair trade conditions to this market so that
6 we can compete and not be forced to undertake further
7 shutdowns.

8 Relief in the form of antidumping duties
9 against imports from China is badly needed. Thank you
10 very much.

11 MR. ROSENTHAL: Our next witness is Mr.
12 Barfield.

13 MR. BARFIELD: Good morning, Mr. Carpenter
14 and Commission staff. My name is Scott Barfield, and
15 I'm a senior account manager with Nan Ya Plastics
16 America, a subsidiary of Taiwan-based Nan Ya Plastics
17 Corporation.

18 Nan Ya Plastics Corporation is a diversified
19 producer of chemicals, plastics and electronics. I
20 have been with Nan Ya for 13 years. My work
21 experience there includes production, technical
22 service and the last six years of sales. Nan Ya
23 America is a Petitioner in this case and supports the
24 imposition of antidumping duties on Chinese origin
25 polyester staple fiber.

1 In recent years, rapidly escalating volumes
2 of Chinese imports have severely affected Nan Ya, as
3 well as the overall domestic industry, by driving down
4 prices, taking over market share and causing
5 significant financial injury to the industry.

6 To compete against cheaper Chinese imports,
7 Nan Ya America has furiously lowered prices or
8 forestalled or limited price increases to try to
9 retain customers, but this has proven very difficult
10 given the consistent increase in raw material costs.

11 Given our position as a subsidiary to a
12 Taiwanese producer, the decision to launch a trade
13 investigation against Chinese imports did not come
14 lightly. We were, however, forced to act or see our
15 market overrun and our future jeopardized. In May,
16 Nan Ya America was forced to shut down its production
17 line producing conjugant staple fiber, which had
18 historically been one of Nan Ya's higher margin
19 products.

20 Conjugate PSF has a three-dimensional spiral
21 twist in the fiber designed to provide greater loft or
22 fill capacity to the fiber. Non-conjugate fiber has a
23 two-dimensional sawtooth crimp and provides somewhat
24 lesser fill capacity.

25 Conjugate fiber is produced using a slightly

1 more expensive production process involving two
2 polyester polymer strings with differing viscosities.
3 One polymer string cools slightly faster than the
4 other, imparting the characteristic spiral twist to
5 the fiber.

6 When ordering certain PSF, customers conduct
7 a type of total cost analysis that compares the cost
8 of the fiber against its fill capacity. Some
9 customers for certain end use applications find that
10 it is better to pay slightly more for the better fill
11 capacity of conjugate fiber, but as a result will not
12 need quite as much PSF for that end use.

13 Other customers may elect to pay a little
14 less for mechanically crimped fibers with lesser fill
15 power, while using slightly more PSF than in the
16 application. Recently, however, imports of conjugate
17 PSF from China have virtually eliminated any price
18 premium for conjugate fiber.

19 As noted in the petition in Exhibit Injury
20 6, in May Nan Ya shut down its conjugate production
21 line, which had been running at 50 percent of
22 capacity, as a result of Chinese imports. Chinese
23 conjugate PSF is made using the same production
24 process that is used by Nan Ya and is of comparable
25 quality.

1 Nevertheless, because of significantly lower
2 prices from China, Nan Ya has had difficulty competing
3 for sales of this product. Indeed, we include
4 numerous examples of lost sales of conjugate PSF, as
5 well as other types of PSF produced by Nan Ya, in the
6 petition at Exhibit Injury 4.

7 This week, as a result of the filing of this
8 trade case and renewed customer inquiries for Nan Ya's
9 conjugate PSF, we restarted our conjugate production
10 line. Nan Ya is familiar with the Chinese chemical
11 fibers market generally as our parent company recently
12 completed a polyester filament plant in Kunshan,
13 China. That facility will produce only polyester
14 filament, and the company has no immediate plans to
15 produce other products, including certain PSF, at
16 Kunshan.

17 Chinese production of certain PSF is massive
18 and increasing rapidly. This is best evidenced by
19 China's rapid rise as an import source. In fact,
20 China didn't even begin importing material volumes of
21 PSF to the United States until recently, yet is now
22 the largest source supply of PSF imports.

23 Equally troubling is China's rapidly
24 expanding capacity. Growth outstrips domestic demand
25 in China, meaning that the excess capacity must be

1 exported. The European Union, however, has imposed
2 antidumping duties on Chinese PSF, foreclosing the
3 European Union at least in part as a principal export
4 market for Chinese PSF.

5 As a result, the United States remains the
6 most logical export destination for excess Chinese
7 supply. This will continue pricing pressures in the
8 U.S. market, forcing U.S. producers to further cut
9 prices to retain market share or cede customers to the
10 Chinese producers.

11 As a result, market conditions for U.S.
12 producers will continue to deteriorate without relief
13 from unchecked Chinese imports of certain PSF. As
14 noted, Nan Ya shut down its conjugate production line
15 in May as a result of Chinese imports. Nan Ya America
16 took this action to try to limit the negative
17 financial consequences of running production equipment
18 at such low and unprofitable capacity levels.

19 We are pleased that we have been able to
20 restart conjugate production as a result of the filing
21 of this case and renewed customer interest. If,
22 however, the influx of low-priced Chinese imports is
23 not dealt with Nan Ya faces a certain prospect of
24 permanently closing this and other production lines.

25 We ask that this Commission come to the aid

1 of the domestic industry and find that the domestic
2 industry is injured by reason of Chinese imports and
3 certain PSF.

4 Thank you.

5 MR. ROSENTHAL: Thank you, Mr. Barfield.

6 Kathleen Cannon will discuss the legal
7 issues in this case.

8 MS. CANNON: Good morning. I'm Kathleen
9 Cannon of Kelley Drye Collier Shannon. On behalf of
10 Petitioners, I'd like to briefly address a few legal
11 issues presented by this case.

12 Fortunately, this investigation follows
13 Commission determinations issued in both an
14 investigation and a sunset review of polyester staple
15 fiber from Korea and Taiwan, so many issues that might
16 otherwise be subject to lengthy debate have been
17 decided by the Commission in that earlier case.

18 Because the facts and the market conditions
19 observed by the Commission in the Korea/Taiwan case
20 remain true today, the same basic conclusions continue
21 to apply.

22 First, like product. In the original
23 investigation of polyester staple fiber from Korea and
24 Taiwan, the Commission found two separate like
25 products consisting of certain PSF and low melt PSF

1 because the scope of that case included low melt PSF.
2 The scope of this case, by contrast, is limited to
3 certain PSF and does not include low melt.

4 For all of the reasons the Commission
5 identified in defining certain PSF as the like product
6 in those earlier investigations and in the sunset
7 review and in the absence of any real change in the
8 product or market that would warrant a different
9 conclusion, the Commission should define the like
10 product as co-extensive with the scope of this case,
11 certain PSF.

12 Second, the domestic industry. Based on the
13 like product definition, the domestic industry should
14 be defined as all U.S. producers of certain PSF, the
15 definition also adopted by the Commission in the
16 earlier case.

17 At this time we see no reason to exclude any
18 U.S. producer under the related party provision based
19 on either a relationship or importation. We will
20 examine this issue further in light of some of the
21 proprietary information we've received and address it
22 if appropriate in our postconference brief.

23 Third, negligibility. Imports from China
24 far surpass the three percent statutory negligibility
25 level. The petition presented data for the most

1 recent 12 month period that was available at that
2 time, which was May 2005 through April 2006, at which
3 point imports from China accounted for 38.7 percent of
4 all imports.

5 We've recently received updated data for May
6 2006, and based on that updated June 2005 through May
7 2006 period imports from China now account for 39
8 percent of all imports, well beyond the statutory
9 threshold.

10 Fourth, causation. The recent decision by
11 the Federal Circuit in the Bratsk case has prompted
12 further scrutiny of whether the injury observed is by
13 reason of subject imports as opposed to non-subject
14 imports. The Court in that case also discussed
15 whether non-subject imports might replace subject
16 imports, thereby denying the U.S. industry of the
17 benefit of an order.

18 We disagree with the Court's holding in
19 Bratsk to the extent that it suggests any additional
20 inquiry as to import replacement or benefit is
21 appropriate beyond the statutory prerequisites. We
22 also note that the mandate in Bratsk has not yet
23 issued because of the petitions for rehearing en banc
24 that were filed by the Commission and by other parties
25 in that case. Those are all still pending before the

1 Court.

2 In any event, the facts presented here are
3 very different from those examined by the Bratsk Court
4 and raise no similar causation issues. Specifically,
5 in Bratsk the Court questioned whether other non-
6 subject imports might be well positioned to fill any
7 void left by subject imports if an order were to be
8 imposed and continue to injure the U.S. industry.

9 The two other major sources of PSF imports
10 to the United States here are Korea and Taiwan. Both
11 of those countries are subject to preexisting
12 outstanding antidumping duty orders to ensure fair
13 trading practices and fair prices, providing a check
14 on those imports, unlike the other imports examined in
15 Bratsk.

16 Further, the volumes of imports of PSF from
17 both Korea and Taiwan have declined over the period of
18 investigation to levels below those of China. As
19 indicated in our petition, major producers in both
20 Korea and Taiwan have opened production facilities in
21 China in an apparent attempt to avoid the duties the
22 U.S. has imposed on imported PSF from Korea and
23 Taiwan.

24 This shift and the increased volumes from
25 China suggest that imports from Korea and Taiwan are

1 not positioned to replace imports from China, but
2 instead that imports from China are positioned to
3 replace imports from other suppliers and then some.
4 Under these facts, it is not likely that non-subject
5 imports would replace subject imports and cause injury
6 to the U.S. industry.

7 Instead, the facts of record here
8 demonstrate, as Dr. Magrath will further discuss, that
9 the domestic industry producing certain PSF has
10 suffered material injury by reason of imports from
11 China and would benefit from the imposition of an
12 order to correct Chinese dumping practices
13 irrespective of the presence of other imports in this
14 market.

15 Thank you.

16 MR. ROSENTHAL: Thank you.

17 Dr. Magrath?

18 MR. MAGRATH: Thank you.

19 Good morning, members of the Commission
20 staff, ladies and gentlemen. My name is Patrick
21 Magrath, Georgetown Economic Services. Accompanying
22 me is Gina Beck, also of Georgetown Economic Services.
23 We are here this morning to discuss factors relating
24 to injury, causation and threat.

25 This product and industry, as we have

1 emphasized, are not new to the Commission or to you,
2 the staff members. In fact, it has only been four
3 months since the Commission completed the sunset case
4 on this same product and came to the conclusion that
5 the industry was in a vulnerable condition.

6 In that very recent investigation,
7 comprehensive data on the PSF industry was collected
8 through the period of September 2005. In other words,
9 33 of the 39 months of this current investigation is
10 overlapped by that sunset case. Although we are all
11 cognizant of the somewhat different standards applied
12 in sunset cases, the recent date of the sunset
13 determination makes it particularly relevant to the
14 analysis here.

15 In the recently concluded sunset case, the
16 Commission identified a number of conditions of
17 competition as pertinent to this analysis. These
18 background factors certainly have not changed in the
19 four months since the ITC made its sunset
20 determinations.

21 Then the Commission described the demand
22 conditions for PSF as "increasing as the strong
23 housing market increased demand for furniture and
24 bedding containing PSF and will" -- that is the market
25 -- "remain robust in the foreseeable future."

1 The responses you have collected in this
2 case will show a modest linear increase in consumption
3 in each year, 2003 to 2005, and then a slight decline
4 in interim 2006, January through March, but that
5 decline is only from the record levels of 2005, so the
6 market remains healthy.

7 Unfortunately, that health is in stark
8 contrast to the U.S. industry, which suffered
9 operating losses in 2003, 2004, a barely break even
10 profitability in 2005, before dropping back into the
11 red in the latest interim period, first quarter 2006.

12 As for the supply conditions found in the
13 sunset case, we would note that U.S. producers in this
14 period of investigation have continued to close down
15 facilities, as you have heard from the witnesses this
16 morning, and that industry capacity has continued to
17 shrink. Despite that, there exists substantial unused
18 capacity as reported by U.S. producers throughout the
19 period of investigation.

20 Other conditions recognized by the
21 Commission related to the supply in the U.S. market
22 include the escalating costs in general of the
23 petroleum-based raw materials and used plastic bottles
24 in particular. The data collected here will show
25 those unit raw material costs and total costs still

1 increasing into 2006.

2 The cost increases again are the background
3 factors, the supply factors. The real issue for
4 producers is whether those increased costs can be
5 passed on to the customers and some profitability
6 achieved. This issue will be addressed later.

7 Finally, among the supply conditions noted
8 in the sunset case the Commission determination noted
9 that non-subject imports had doubled over the period
10 of review. The Commission's own explanation for the
11 startling increase in non-subject imports is worth
12 quoting in its entirety. This is from the Commission
13 determination four months ago.

14 "Most of the increase in non-subject import
15 volume and market share over the POR is attributable
16 to the emergence of China as the largest source of
17 non-subject imported certain PSF. The share of
18 non-subject imports comprised of Chinese certain PSF
19 by volume increased from .7 percent in 2000 to 43
20 percent in 2004 and rose from 42 percent in interim
21 2004 to 60 percent in interim 2005. Among the major
22 sources of non-subject imports, non-subject imports
23 from China possessed among the lowest average unit
24 values throughout the POR."

25 Well, now isn't that probative, as the

1 lawyers would say? Petitioners in this proceeding
2 cannot make their central point any clearer than what
3 the Commission said just four months ago. The reason
4 we are here today is that non-subject imports, or at
5 least a preponderance of them, have now become the
6 subject imports, so let us turn to the issue of the
7 volume effect of imports from China.

8 The increase in the subject imports has been
9 spectacular over the period of investigation, rising
10 by 161 percent from 2003 to 2005 and an additional 97
11 percent in the interim period. Indeed, the increase
12 in imports between 2004 and 2005 alone was 173
13 percent.

14 Now, we realize that you as veteran ITC
15 professional staff members have heard the term
16 "spectacular increase" from Petitioners once or twice
17 over the years, but really how would you characterize
18 a 161 percent increase followed by an additional
19 nearly doubling in volume in the most recent interim
20 period?

21 Importantly, these increases were achieved
22 in a market that as a whole increased by two percent
23 in 2003 to 2005 and, as we said, even declined
24 slightly in January-March 2006. What that means is
25 that the rapid and sustained increase in unfair

1 imports on an absolute basis is tracked by similar
2 increases in market share for these imports.

3 As a percent of domestic consumption,
4 imports from China's share increased from 7.3 percent
5 in 2003, more than doubled to 18.7 percent in 2005 and
6 then more than doubled again from roughly 12 to 24
7 percent of the market in the first quarter of 2006.

8 The increase in subject imports from China
9 on a relative as well as absolute basis then has been
10 significant. The current share that the unfair
11 imports have achieved in the market, almost 24
12 percent, almost one-quarter of all consumption, is
13 significant.

14 As for the price effects of imports, the
15 Commission has recognized that in a commodity product
16 such as PSF the only way for import sources to
17 increase market share so rapidly as how has occurred
18 here in rather dramatic fashion is by aggressive low
19 pricing.

20 The full degree to which unfair imports from
21 China have undersold comparable U.S. products and
22 depressed or suppressed U.S. prices of course awaits
23 the development of the record through the submission
24 of questionnaires. However, there are already facts
25 that indicate such underselling is likely to be

1 widespread and deep.

2 For example, comparing average unit values
3 of U.S. import statistics with those of U.S. producers
4 shows AUVs of imports from China as consistently and
5 substantially lower than those of U.S. producers
6 during each year of the investigative period.
7 Ominously, these margins of underselling have
8 increased significantly in the latest interim period
9 to 51 percent beneath U.S. AUVs.

10 In addition, the AUVs of subject imports
11 were also lower than AUVs of all other import sources
12 for each year in the period of investigation, as the
13 Commission itself noted in its sunset determination
14 that I quoted earlier.

15 Finally as to the price effect, Petitioners
16 have provided 16 examples of lost sales to imports
17 from the subject country by reason of price totaling a
18 significant loss in value terms. A comparison of the
19 quoted U.S. price and the import price from these lost
20 sales examples reveals offers from Chinese sources of
21 up to 22 percent beneath U.S. prices for the identical
22 material.

23 Examples cited are predominantly -- these
24 are examples in our lost sales exhibit -- for the high
25 value PSF products on which the ITC has requested

1 pricing data. Unfair imports from China thus are
2 coming in and taking away the heart of the U.S.
3 market.

4 These negative volume and price effects of
5 the unfair imports have resulted in a significant
6 negative impact on U.S. industry operations. The
7 domestic PSF industry has been hammered in seriatim by
8 unfair imports for almost a decade.

9 Having gotten Korea and Taiwan under order
10 in 2000, domestic industry profitability, as you can
11 see from the database, the public database of the
12 sunset determination, domestic industry profitability
13 was approaching break even in 2002 due to a drop in
14 imports and a healthy upswing in the business cycle.

15 Then along came China, whose adverse volume
16 and price effects we've been discussing. This has had
17 an increasingly negative impact on the industry, an
18 industry that has already been the victim of such
19 negative impacts from a tag team of import sources.

20 When faced with a market onslaught of this
21 magnitude, a domestic producer can choose to respond
22 in one of two ways. It can attempt to meet the lower
23 import prices, and typically these are translated in
24 the market. These are prices quoted back to them by
25 their customers. We will provide several examples of

1 these pressure tactics by the customers to have our
2 clients lower their prices in our brief.

3 Meeting import competition in terms of price
4 may preserve the sale, that individual sale, and
5 generally market share, but profitability suffers.
6 Alternatively, the U.S. producers can maintain pricing
7 at the risk of losing the sale.

8 This latter strategy may reduce the hit on
9 profit margins in the short term, but is not a road
10 map for long-term survival because maintaining price
11 and letting customers go to import competitors if they
12 wish reduces shipments, production, capacity
13 utilization, eventually increasing unit cost and
14 impacting profits in the longer run.

15 The U.S. industry, in its attempts to find a
16 way to compete with China, tried both strategies as
17 can be seen in the data. When imports from China made
18 their latest big push into the U.S. market in 2005,
19 U.S. producers to varying degrees sought to maintain
20 prices. In fact, U.S. prices went up. Average unit
21 values increased by 33 percent.

22 Indeed, in 2005 prices had to go up because
23 raw material costs increased even more, by 46 percent
24 on a unit basis. In 2005 then the industry did
25 succeed entertaining a small 1.4 percent profit on

1 sales as we calculate it, but it did so at the expense
2 of allowing a 173 percent increase in imports from
3 China in that one year and in the process ceding to
4 Chinese suppliers nine points of market share. This
5 is what the U.S. industry lost in 2005.

6 The first negative impact we want to
7 emphasize to you then, and it is a whopper, is this
8 nine point loss of market share in 2005. Quite a
9 price to pay for a one and a half percent operating
10 profit.

11 Your database will show that U.S. producers
12 then, reeling from these developments in 2006, could
13 not raise prices sufficiently, even though both unit
14 raw material costs and total cost of goods sold
15 continued to increase. The result was an immediate
16 plunge back into the red in 2006 with the industry as
17 a whole losing roughly two percent on sales.

18 In short, in the face of the huge increase
19 in low prices of imports from China neither a price
20 maintenance nor a market share strategy can succeed.
21 Only a return to fair value pricing by Chinese import
22 sources, something that we cannot depend on them doing
23 on their own, will stabilize the market and allow the
24 U.S. industry a chance for long-term survival.

25 The dramatic decline in U.S. industry

1 shipments and market share in 2005, followed by
2 negative profitability in 2006, are accurate
3 harbingers of the level and trend of other injury
4 indicia that will be reported by U.S. producers to you
5 on questionnaires.

6 The data the ITC is in the process of
7 gathering will show capacity of the U.S. industry
8 shrinking. The report will show examples of recent
9 shutdowns of capacity by U.S. producers. As a whole,
10 capacity utilization would never achieve an efficient
11 or a profitable level, and it has declined to a period
12 low of under 54 percent in this latest interim period.

13 As referenced above, trends in industry
14 sales values have lagged cost increases throughout the
15 POI as evidenced by high, unprofitable cost of goods
16 sold sales ratios and unit costs exceeding average
17 unit values.

18 Inventories have increased. Employment of
19 production and related workers has declined from 2003
20 to 2005, as well as in interim 2006, and, as we have
21 emphasized throughout, the industry will report
22 negative operating profitability in all periods save
23 2005.

24 In conclusion, we hope the staff and the
25 Commission will keep in mind that these uniformly

Heritage Reporting Corporation
(202) 628-4888

1 inadequate levels and these declining trends were
2 experienced within the context of a healthy market and
3 as import volumes from Korea and Taiwan declined.

4 Thus, the problems of the industry can now
5 clearly be laid at the door of the one market source
6 that has increased volume and share to a prominent
7 position in the period on the basis of the lowest
8 prices of any supplier -- China.

9 Briefly in terms of threat factors,
10 Petitioners wish to note the following: First, the
11 imports from China both on an absolute and relative
12 basis have registered rapid increases, attaining
13 significant U.S. market share. In the threat context,
14 this demonstrates the capability and the willingness
15 of the Chinese to continue to export at injurious
16 levels.

17 Second, central to the ability of the
18 Chinese to export these large volumes is the low
19 prices that they offer on their exports. Low prices
20 at ever increasing volumes have the ability to
21 continue to undersell and suppress or depress U.S.
22 industry prices.

23 Third, there is a very large industry
24 producing PSF already in China, as our petition cited
25 an authoritative trade publication which compiled a

1 list of well over 100 producers in the country. That
2 list is in our petition with both current and
3 projected capacity by producer.

4 That capacity total has increased
5 substantially from 2003 and is projected to grow over
6 the coming years. As it exists even today is more
7 than sufficient to supply the entire U.S. market if
8 left unchecked.

9 Fourth, capacity in China exceeds its home
10 market demand, so a large volume of the material must
11 be exported.

12 Finally, the European Union, the other major
13 consuming region and potential outlet for Chinese
14 exports, already has imposed dumping duties on the
15 Chinese product as of 2005. These duties, reports the
16 *Chinese People's Daily*, a newspaper, are "punitive"
17 and "have deprived most of these firms of access to
18 the European market." Hence, there is a heightened
19 threat that those volumes will be deflected and indeed
20 are being deflected as we speak to the United States.

21 All of these above factors indicate the
22 ongoing threat of imports of PSF from China is both
23 real and imminent.

24 Thank you very much. That mercifully
25 concludes my presentation.

1 MR. ROSENTHAL: Before we answer questions I
2 do want to introduce one other industry witness, and
3 that's Ricky Lane from DAK Americas who's here to help
4 answer any questions he might.

5 With that, we're ready to do what we can to
6 answer your questions.

7 MR. CARPENTER: Thank you very much for your
8 presentation. We will begin the staff's questions
9 with Mr. Wise.

10 MR. WISE: Hello, and thank you for your
11 presentation and coming today. I just had a few
12 questions about production and shipments in the U.S.
13 market.

14 With regard to 2004 being a peak in
15 production and shipments, could you explain why it
16 peaked in 2004 and then why did it decline, but over
17 the period of investigation increase? Was this a
18 result of the hurricanes or some other market
19 condition?

20 MR. BERMISH: Well, the major reason why the
21 shipments declined in 2005 was specifically because of
22 imports. The hurricane had some effect toward the end
23 of the year, but the major effect was the rapid rise,
24 the significant rapid rise in Chinese imports in 2005.

25 MR. WISE: Okay. And that would be the same

1 answer for consumption as well, consumption in the
2 U.S.? U.S. shipments have decreased, though still
3 rising over the POI because of imports?

4 Do you understand? I'm sorry.

5 MR. ROSENTHAL: It's a little hard to hear
6 you.

7 MR. WISE: It appears that U.S. shipments
8 have increased over the POI, but because of the peak
9 in 2004 they're decreasing recently. This is the same
10 reason? Imports are causing the decrease, not the
11 hurricanes or production or supply issues within 2004?

12 MR. BERMISH: That's correct.

13 MR. WISE: Okay. The second issue I had, in
14 the petition you stated that two specific companies
15 were transferring locations into China from Korea and
16 Taiwan.

17 Where did this information originate, and
18 are there other identified firms that you can provide
19 that are relocating to China specifically?

20 MS. CANNON: The information in the exhibit
21 to our petition that sets forth all the Chinese
22 producers lists those two producers, and we had other
23 market intelligence in advance of receiving that that
24 indicated that they had opened facilities in China,
25 but it is documented in that exhibit setting forth

1 what their capacity is in China and what the projects
2 are.

3 MR. WISE: Okay. Through the investigation
4 so far I've had some discussions with different
5 individuals about the imports from China are actually
6 made from a different waste stock than the regenerated
7 product in the U.S.

8 You identified some saying, continuing on
9 the same issue, they're completely competeable.
10 However, could you describe the desirability of
11 certain waste stocks? Is PET the desirable one?

12 Therefore, could you identify is there a
13 cost associated with using a less desirable waste
14 stock to produce PSF, or are they all the same?

15 MR. BERMISH: Well, it sort of depends. PET
16 bottles, which is the one that I believe you're
17 referring to in terms of what the Chinese are
18 importing from the U.S., the prices tend to certainly
19 vary.

20 The Chinese though have a pretty significant
21 impact on the pricing of PET bottles in this country
22 for recycled applications based on the amount of
23 volume that they end up importing. They've become a
24 significant factor in this marketplace.

25 It does play a role also in terms of the

1 cost of what we refer to as postindustrial waste in
2 that as the demand for PET bottles increases it tends
3 to have a subsequent pull on or has a pull on the
4 demand for the postindustrial waste simply because the
5 prices of PET bottles go up and, therefore, you start
6 looking for alternatives. In that sense, you know,
7 the prices tend to relate.

8 Is that answering your question?

9 MR. WISE: I believe so. So PET would be
10 the desirable one, PET bottles?

11 MR. BERMISH: Not necessarily.

12 MR. WISE: Not necessarily?

13 MR. BERMISH: Not necessarily.

14 MR. WISE: Does the recycling input or the
15 feedstock that goes into the recycling create the
16 color that you would see other than white? Another
17 issue that came up seemed that vibrant colors are
18 being imported into the U.S.

19 MR. BERMISH: Which colors? I'm sorry.

20 MR. WISE: There was salmon. There was
21 bright blue, indigo. There was an issue brought that
22 these should not be looked at as comparable to certain
23 PSF. Is the color important?

24 MR. BERMISH: Remember, most or just about
25 all of the certain polyester staple fiber goes for

1 fibersil, which is basically hidden. You don't see
2 the color.

3 Typically most of the color is a little bit
4 off-white. It's not the white that you would see for
5 the non-subject polyester staple fiber. Color really
6 is not an issue simply because you just don't see it.

7 MR. WISE: Okay.

8 MR. ROSENTHAL: Just to follow up on that,
9 Mr. Wise, in the Korea and Taiwan original
10 investigation and to a lesser extent in the sunset
11 review Respondents made similar arguments, to the
12 extent I can discern what they're telling you -- they
13 haven't made them publicly yet -- but the notion there
14 is that somehow because the raw material inputs are
15 different, come from waste versus virgin or a
16 particular type of waste, that somehow the end product
17 is not comparable.

18 I think we demonstrated very clearly in the
19 original investigation with Korea and Taiwan and in
20 the subsequent review that that is a bogus argument.
21 What the customer cares about is the end product, not
22 the raw material that goes into making that end
23 product.

24 The products that come out of China are
25 directly comparable with and compete directly against

1 the products produced by the U.S. producers.

2 MR. WISE: My next question is regarding
3 conjugate. Is the by-component production process the
4 only way to make conjugate, or is there another method
5 which creates the loft?

6 Another issue that was raised in my
7 discussion with various people was that Chinese
8 regenerated project is like conjugate, but not
9 conjugate. It creates a superior loft.

10 MR. BERMISH: Wellman makes a non-conjugate
11 fiber, a mechanically crimped fiber, made from
12 recycled raw materials which has just about all the
13 characteristics and competes directly with conjugate,
14 and that is a similar product to what you're referring
15 to with respect to the Chinese.

16 MR. WISE: Okay.

17 MR. BARFIELD: I'd like to add to that also.
18 We produce in our production line true conjugate
19 fiber, which is a co-polymer. It directly would
20 compete with a mechanically crimped fiber such as
21 Wellman produces.

22 The characteristics of the end product are
23 virtually very similar or the same, and they're able
24 to meet the customers' requirements. They are able to
25 pretty much replicate what a true conjugate fiber is.

1 MR. WISE: Okay.

2 MR. ROSENTHAL: Mr. Wise, just let me add
3 one other thing.

4 It sounds like some of the things you're
5 hearing from the Respondents are repeating the
6 confusion that was shown in the original investigation
7 and again in the sunset review, confusion involving
8 the raw material inputs versus the outputs.

9 You can have all sorts of different products
10 or all sorts of different inputs, but it doesn't
11 matter necessarily. It's not conjugate versus
12 recycled or regenerated because the regenerated is the
13 nature of the raw material that's going in versus the
14 output, which is conjugate, versus mechanically
15 crimped.

16 There was ultimately a rather painful set of
17 questions and dialogue between the Commissioners and
18 some of the importers at the hearing where they
19 admitted in the sunset case that in fact they were
20 confusing the difference between the output and the
21 input, so it's very important to make sure that we're
22 understanding the terms and not confusing the raw
23 materials versus the finished product.

24 MR. WISE: Thank you.

25 I only had one more question. You indicated

1 -- I don't remember if it was Mr. Bermish -- that in
2 attempting to raise prices you had discussions with
3 your customers, and sometimes they failed.

4 Did you then keep your prices at the
5 original level, or did that customer leave? What
6 occurred after the price increase failed?

7 MR. BARFIELD: As we made a price increase
8 announcement or attempted to raise the price customers
9 would not accept these increases. They would ask us
10 to match the low-priced import fiber.

11 In some cases they were virtually -- they
12 would constantly give us the pricing from China and
13 tell us that we would have to match that to keep the
14 business.

15 In some cases they would actually just
16 switch supply on us because they knew we could not
17 match it, so virtually we would lose the business
18 because we couldn't match the price.

19 MR. WISE: Okay. Thank you. Those are all
20 the questions I have for now. Thank you for your
21 answers.

22 MR. CARPENTER: Mr. St. Charles?

23 MR. ST. CHARLES: Good morning. I'm Charles
24 St. Charles with the Office of the General Counsel.
25 That means I'm the lawyer. I actually don't have any

1 legal questions. Thank you for your discussion of the
2 legal issues as you perceive them.

3 I did hear many references to the recent
4 review of Taiwan and Korea and the original
5 investigation. It is perhaps a legal issue that the
6 record in that case will be a separate record from
7 this case if there is testimony of importers that is
8 not specific to Korea and Taiwan, but relates to the
9 differences between the products that you referred to.

10 If there were 10 or 12 pages from the
11 transcript, for instance, that you thought was
12 relevant if you could clearly identify who the
13 witnesses were, what their competence was and what the
14 statement was, particularly those statements that it
15 seemed the Commission ultimately relied upon, that
16 would be useful because the fact that the Commission
17 made the decision not on a slightly different legal
18 standard, a very different legal standard, may or may
19 not prove relevant here.

20 If your position is it's relevant please
21 give us whatever was on the record publicly that we
22 could rely on. That's my only request. Thank you.

23 MR. ROSENTHAL: Mr. St. Charles, we'll
24 certainly do that. I'm wondering whether in addition
25 in order to not bury the Commission in paper --

1 MR. ST. CHARLES: That's why I said 10 or 12
2 pages.

3 MR. ROSENTHAL: Would citations to certainly
4 things like the Commission's determinations plus some
5 transcript pages be something that would work?

6 MR. ST. CHARLES: We understand what we
7 said. Yes, citing. Please don't resubmit our
8 determination. We don't need to see that again.

9 My point is only I see a certain shorthand
10 starting, and at the end of the day my fear is this
11 record won't contain that which you're referring to,
12 and I just would like all the loose ends tied up.

13 MR. ROSENTHAL: Understood. Thank you.

14 MR. ST. CHARLES: Yes. If that was the
15 question, please don't bury us in paper.

16 MR. ROSENTHAL: Very good.

17 MR. ST. CHARLES: Thank you.

18 MR. CARPENTER: Having said that, of course
19 you can feel free to cite to anything in the public
20 record from the previous review, and that will be made
21 part of the record of this investigation without
22 incorporating major documents into this investigation.

23 Mr. Benedetto?

24 MR. BENEDETTO: This is John Benedetto.
25 Thank you all for your testimony. If I ask any

1 questions about any business confidential material,
2 please indicate that and just follow up in your brief.

3 We asked for pricing data in the
4 questionnaires, as I'm sure you all know, and I heard
5 today the testimony of Mr. Bermish who said that
6 virgin and regenerated are virtually the same. They
7 compete in the market against each other.

8 We have two products that are virgin that
9 are virtually identical to two other products that are
10 regenerated, and I'm wondering if we ought to combine
11 the data for those.

12 In other words, one product is a virgin
13 polyester staple fiber, five to seven denier, solid
14 and dry. Does that compete directly with 100 percent
15 regenerated polyester staple fiber, five to seven
16 denier, solid and dry? Would those two products
17 compete directly with each other? Is it worth
18 combining that data?

19 MS. CANNON: Yes. Let me just say what our
20 position is, and then I'm happy for Mr. Bermish to
21 supplement on the technical side of these two.

22 We in fact in the petition urge the
23 Commission to do exactly that.

24 MR. BENEDETTO: Okay.

25 MS. CANNON: It has always been our position

1 that the inputs are irrelevant and that the products
2 do compete and that the pricing categories should be
3 combined. In fact, in the original investigation of
4 Korea and Taiwan they were.

5 The Respondents resisted that and urged you
6 to separate them, so the Commission has historically
7 done that and did separate them in the sunset review,
8 but it is our position that there really is no
9 justification to differentiate them for the reasons
10 Mr. Bermish gave.

11 MR. BENEDETTO: Okay. So for the record you
12 would support combining those two products, one and
13 six and two and seven?

14 MS. CANNON: Correct. That's correct.

15 MR. BENEDETTO: Did you have any comments on
16 that, Mr. Bermish?

17 MR. BERMISH: Nothing further to add.

18 MR. BENEDETTO: Okay. Just a couple of
19 small issues, I think.

20 In terms of price, what effect does PSF
21 being slick versus dry have? Is one more expensive
22 than the other usually? Do different people purchase
23 slick and dry?

24 MR. BARFIELD: I'm sorry. Scott Barfield.
25 The slick versus dry, generally the dry carries a

1 slight premium, marginally at best, because the dry
2 market is smaller.

3 That way it costs more to produce, but
4 generally customers are so sensitive to price they
5 like for you to price them as close to each other as
6 possible.

7 MR. BENEDETTO: Do some customers purchase
8 both slick and dry?

9 MR. BARFIELD: Yes. Yes.

10 MR. BENEDETTO: So a customer could use
11 slick or dry for the same application, or do they use
12 them for --

13 MR. BARFIELD: Generally it's different
14 applications.

15 MR. BENEDETTO: Generally different
16 applications.

17 Does anyone else have anything to add to
18 that?

19 (No response.)

20 MR. BENEDETTO: Similarly, what effect does
21 the difference between hollow versus solid have on
22 price? Does that affect price at all?

23 MR. BARFIELD: No.

24 MR. BENEDETTO: Are those the same
25 purchasers for hollow and solid?

1 MR. BARFIELD: They are the same purchasers.
2 Again, it's based on the application or what they're
3 trying to achieve with the product. They can specify
4 which fiber they need to achieve their goal in their
5 product.

6 MR. BENEDETTO: Okay. There's been some
7 discussion of raw material prices going up. Do you
8 anticipate that they're going to continue to go up,
9 that raw material costs are going to continue to go
10 up?

11 MR. MCNAULL: Light sweet crude was \$78 a
12 barrel yesterday. It's very difficult to say. That's
13 been one of the difficult things for our business is
14 prognosticating or predicting what raw materials are
15 going to do.

16 I will say, you know, the inputs for
17 polyester are driven off refined products from crude
18 oil streams so there's a lot of volatility, and it has
19 been an issue for the industry. It's hard to say
20 where it will go from here.

21 MR. BENEDETTO: Okay. Does anyone else have
22 anything to add to that?

23 MR. BARFIELD: I'd like to further comment
24 on that.

25 Our outlook for raw materials are definitely

1 to remain on the high side. We really believe they'll
2 continue to increase, especially in the short term.

3 MR. BENEDETTO: Thank you very much.

4 Has there been any problem? Mr. Magrath
5 characterized the market as healthy. Has there been
6 any problem of reduced demand from your U.S. customers
7 moving offshore, moving their production offshore?

8 MR. MCNAULL: I think there's been a slight
9 decrease in demand in the first quarter of 2006. I
10 think, Pat, you referenced that in your opening
11 statement.

12 I think that's more a function of the
13 Federal Reserve raising interest rates and a slight
14 cool down in the housing market, which in turn demand
15 for furniture, furnishings, things like that, is off a
16 bit.

17 It's a very robust market. I mean, as Pat
18 had said, in 2005 we were at tremendous record levels
19 and just a slight cooling in early 2006.

20 MR. MAGRATH: Fiberfill may be distinguished
21 from other textiles and textile end markets like
22 apparel that is declining as the end users move
23 offshore.

24 The end uses for this product are, as has
25 been on the record of all these cases and as we've

1 said many times, tied to the housing market and home
2 improvement and those kind of bedding products that go
3 up along with the housing market. The housing market
4 has been strong traditionally.

5 Also, the Magraths threw out all their
6 feather pillows last year and replaced them with
7 pillows filled with hypoallergenic polyfil from one of
8 our clients, I believe, so that is also a factor in
9 there.

10 They have healthy end markets, which of
11 course makes the experience that they're going to
12 report to you, financial and otherwise, it puts it in
13 stark contrast.

14 MR. BENEDETTO: Mr. McNaul, during your
15 testimony you referenced some problems with supply
16 during the aftermath of the Katrina hurricane.

17 Do I understand your testimony correctly,
18 and this may be a confidential question. You can
19 answer it in the brief. You are not currently having
20 any trouble supplying U.S. customers? Is that
21 correct?

22 MR. MCNAULL: Yes, that's correct. I mean,
23 there were surcharges announced in the industry
24 publicly because of the hurricane issues and the
25 increase in raw material costs, but we didn't put any

1 of our customers in a position where we couldn't
2 supply. Everything is basically back to normal today.

3 MR. BENEDETTO: And you anticipate things
4 remaining normal? I know you're not a meteorologist,
5 but --

6 MR. MCNAULL: Right. I would have given a
7 couple of Category 5s.

8 Yes. We don't anticipate anything changing.
9 We don't have issues with supplying our customers or
10 getting raw materials throughout our operation.

11 MR. BENEDETTO: Does anyone else have
12 anything? Is that the same experience for the rest of
13 the industry?

14 MR. BERMISH: It's the same experience for
15 Wellman as well.

16 MR. BARFIELD: And the same with Nan Ya.

17 MR. BENEDETTO: Okay. Mr. Magrath, you said
18 in your testimony, and I may have misheard you, that
19 our pricing products are high value products. Is that
20 correct? Are these higher value products than other
21 PSF products that are out there?

22 MR. CLARK: Start up times.

23 Mr. Barfield, you said that the line was
24 shut down and you brought it back up. In general I
25 wanted to take the shut down to the conjugate line or

1 bring it back up from the time the decision is made
2 until it's finished.

3 MR. BARFIELD: Generally shut down time and
4 restart time is anywhere from 32 to 48 hours to get
5 the line up and confirm the quality and uniformity of
6 your production.

7 MR. CLARK: How long would it take to get
8 back up to 100 percent production?

9 MR. BARFIELD: We could achieve that within
10 two days or less.

11 MR. CLARK: Other than that, again, we just
12 finished this review a few months ago, unless there's
13 some other alignments in the industry. I haven't seen
14 anything in any of the news about any other mergers or
15 any new entrants. No new processes I assume.

16 (Nonverbal response.)

17 MR. CLARK: Okay. That's all the questions
18 I have. Thanks.

19 MR. CARPENTER: Ms. Mazur?

20 MS. MAZUR: Thank you. Good morning to all
21 who traveled here to be with us today. I always
22 appreciate industry witnesses giving us direct
23 testimony for the record. Just a few quick questions.

24 Mr. Barfield, I believe you mentioned
25 something about Nan Ya having Chinese facilities or

1 did I understand that correctly? What is it that you
2 do there in China and is it related to certain PSF?

3 MR. BARFIELD: We are currently constructing
4 a facility in China, but the purpose of that facility
5 is dedicated to polyester filament yarn, which is not
6 PSF, and we don't have production arrangement for
7 that. So it's still the textile polyester product in
8 the industry, but it's a different product entirely.
9 It's a continuous filament production, so it's not
10 related to PSF.

11 MS. MAZUR: Could you produce certain PSF on
12 the machinery and equipment that you have there in
13 China?

14 MR. BARFIELD: No. The machinery used to
15 produce polyester filament yarn is completely
16 different than producing PSF. It's an entire separate
17 engineering design, equipment design, so there's no
18 correlation between PSF and filament. It's a
19 completely different process.

20 MS. MAZUR: Okay. Thank you. With respect
21 to the world market we have heard that there is an
22 order against Chinese certain PSF in the EU. What are
23 other nonsubject markets in the world other than the
24 EU for certain PSF? Major markets.

25 MS. CANNON: I'm sorry. You're asking what

1 other markets are they sold into as a major market
2 other than the EU?

3 MS. MAZUR: Yes.

4 MR. ROSENTHAL: For the Chinese.

5 MS. CANNON: For the Chinese?

6 MS. MAZUR: For the Chinese or what are the
7 big world markets for certain PSF for anyone?

8 MR. BERMISH: Well, the only other market
9 besides the European union and the United States is
10 the Far East market. I'm not aware of any anti-
11 dumping rulings against China in the Far East.

12 MS. MAZUR: Do you know anything about the
13 markets in the Far East for certain PSF --

14 MR. BERMISH: Do I know anything about the
15 market?

16 MS. MAZUR: -- in terms of demand?

17 MR. BERMISH: I know there's a huge over
18 capacity because of China. China is by far the
19 largest producer of polyester staple fiber in the
20 world, let alone the Far East, and they have a
21 tremendous amount of excess capacity in the Far East
22 and they ship all over the place. A lot of capacity
23 in other Far East countries have been shut down
24 because of this excess capacity and low pricing
25 associated with China.

1 MS. MAZUR: Do we have information on the
2 record about world capacity and where China fits in in
3 that?

4 MS. CANNON: We may be able to provide you
5 with that. I think what we've submitted so far is
6 simply the Chinese capacity, but we will look to see
7 if some of the databases we have would have more
8 information on world capacity and put that into our
9 post-conference brief if we're able to locate that.

10 MS. MAZUR: That would be helpful. Thank
11 you.

12 MR. MCNAULL: Just one point, one response
13 to your original question. I think you had asked what
14 regions of the world are consuming the subject
15 material? The only thing I would say to that is I
16 don't have the data at hand, but the United States
17 consumer and the European consumer by far, many
18 multiples higher level per capita capacity than any
19 other region in the world, so those are the primary
20 markets for the subject material.

21 MS. MAZUR: Okay. To the extent that you do
22 have documentation that you could provide post-
23 conference that would be helpful. I believe those are
24 the only two questions I have. Again, thank you very
25 much.

1 MR. CARPENTER: I have a couple questions
2 that relate to the effect of nonsubject imports.
3 Looking at the data from the staff report in the
4 sunset review, which only go through the first three
5 quarters of 2005, so I haven't seen complete 2005 data
6 or the first quarter of 2006 yet, but it appeared to
7 me that imports from China as you mentioned, Dr.
8 Magrath, increased dramatically in 2005, increased by
9 about 70 million pounds, but imports from other import
10 sources decreased by about 56 million pounds whereas
11 U.S. shipments decreased by only about 11 million
12 pounds.

13 Just for the sake of argument I wonder if an
14 argument could be made that the increase in imports
15 from China largely replaced other imports as opposed
16 to domestic production? Do you have any comments on
17 that?

18 MR. MAGRATH: Well, as I emphasized in my
19 testimony the full 2005, as I said the latest big push
20 of Chinese imports in the market, our data on
21 consumption for full year 2005 showed that the market
22 share for U.S. producers went down nine percent and
23 the market share for other imports including Korea and
24 Taiwan went down two percent.

25 So that very significant increase in 2005

1 from China -- and the market was about stable or
2 increased like one percent -- so that very large
3 increase from China came primarily at the expense of
4 U.S. producers.

5 MR. CARPENTER: Okay. So that sounds
6 significantly different than the figures that we had
7 in the staff report, so we'll have to see what the
8 numbers look like when we get complete data for this
9 particular case.

10 MR. BARFIELD: I'd like to make a comment to
11 that also.

12 MR. CARPENTER: Sure.

13 MR. BARFIELD: I had indicated that we had
14 shut down our production line in May of this year.
15 Prior to shutting that line down we were only
16 operating at 50 percent capacity. In 2005 third
17 quarter that line got as low as 30 percent, so we were
18 incurring the pressure from the Chinese imported fiber
19 during that time until eventually it forced us to shut
20 the line down entirely.

21 MR. CARPENTER: Yes.

22 MR. MCNAULL: Mr. Carpenter, I wanted to
23 comment. I think that already a very egregious level
24 of imports and it's an exponential accelerating trend
25 as you went through the year. If you look at the

1 first quarter of the 2006 data you'll see that trend.
2 When you talk about 2005 as an aggregate year there's
3 definitely a trend there where the rate of importation
4 of Chinese goods is increasing month over month.

5 MR. CARPENTER: Okay. We'll look forward to
6 seeing what the numbers show for the first quarter of
7 2006.

8 MR. BERMISH: Also for the record I stated
9 in my testimony that Wellman shut down a good part of
10 its Johnsonville facility in 2005. We removed -- and
11 this is public information -- 80 million pounds out of
12 a facility of 240 million pounds. 160 million pounds
13 that are left as a direct result of the surge of
14 imports.

15 MR. CARPENTER: Okay.

16 MR. MCNAULL: Yes. We also shut down our
17 polykron facility. It happens to be in Mexico, but we
18 plan our assets as a NAFTA base and it was a direct
19 result of the importation pressure cause that we're
20 discussing here.

21 MR. CARPENTER: Okay. Also, in reading
22 through the report from the sunset review I noticed
23 one -- this is only one purchaser, but one purchaser
24 had made a comment that quality of the imports from
25 China were somewhat below that from other countries

1 and that may be totally isolated, but for the industry
2 witnesses here I just wondered what your perceptions
3 are in terms of the quality of the imports from China
4 vis-à-vis U.S. production and other import sources.

5 MR. BARFIELD: I have personal experience
6 dealing with customers running the imported Chinese
7 fiber and their quality is very acceptable to meet
8 their requirements. In a lot of cases it doesn't
9 surpass our quality, but is able to give the customer
10 the quality they need to achieve their product
11 performance and their outlook.

12 So I have seen the Chinese fiber first hand
13 and I've seen them make improvements to meet
14 customers' request if there was an issue. So even
15 China is responding to the customers on a customer
16 base level to improve the fiber and make adjustment
17 and they have accomplished that.

18 MR. CARPENTER: I believe I did see a
19 reference also to the fact that the quality of the
20 imports from China had improved over time. I just
21 wondered if that was your -- it sounds like that's
22 your perception, that if you look over the last few
23 years that the quality has been improving?

24 MR. BARFIELD: That's correct.

25 MR. CARPENTER: Okay.

1 MR. MAGRATH: Mr. Carpenter, I know you
2 asked this question to engender discussion, but if
3 it's like this purchaser said the quality of imports
4 from China are so low then why have they increased 161
5 percent over the POI and doubled their market share to
6 24 percent over the period? There must be a lot of
7 people out there who want inferior quality PSF.

8 MR. CARPENTER: Right. Again, I don't want
9 to make too much of that because China was not a
10 subject country in that case and it could have been
11 just an isolated comment and may have referred to
12 quality a few years ago as opposed to recently.

13 MR. MAGRATH: It's been accepted in the
14 marketplace for sure.

15 MR. MCNAULL: Yes. I mean, major home
16 furnishing companies have shared with us that products
17 that they can use from China now are meet their
18 rigorous quality standards and are much improved over
19 their experience from the past.

20 MR. CARPENTER: Okay. All right. Thank
21 you.

22 Ms. Mazur?

23 MS. MAZUR: Thank you. I forgot one last
24 question. In a preliminary review of the
25 questionnaires that have been coming in particularly

1 from the Chinese producers we're noticing that they're
2 basically new entrants into the market in terms of
3 their exports to the U.S. Do you know anything about
4 how these Chinese producers have gotten into the U.S.
5 market?

6 Has there been a push on a part of an
7 association there to increase exports that you can
8 talk about?

9 MR. MCNAULL: We spoke earlier. We can talk
10 about the vast excess capacity that they put in
11 compared to the demand that the world requires, but I
12 don't have any specific details around associations or
13 what their tactics or methodology of increasing their
14 imports. I don't have any thoughts on that.

15 MR. BARFIELD: Again, I have a personal
16 experience on that also and it's quite alarming when I
17 meet with a customer that, some of these customers
18 obviously buying directly from the company, the
19 manufacturer, so obviously they made trips to China or
20 vice-versa, the Chinese sends salespeople here to get
21 on the ground level to meet one on one with the
22 purchasing agents of these facilities.

23 So they have gotten extremely aggressive to
24 find locations that you would think they wouldn't even
25 find. If you would think of a program that you had

1 that was a reasonably secure program in a relationship
2 with your customer where they seek out and found them.
3 So they have direct contact with China and the
4 customers here in our market.

5 MR. LANE: I'd like to add to that as well
6 -- Ricky Lane with DAK Americas -- is that during our
7 inquiries as to trying to determine where Chinese
8 prices are and other factors the worldwide web
9 certainly is providing a lot of access at publicly
10 listed very low pricing and capacity there.

11 So as far as the direct means and how
12 they're doing it I'm not sure if there is an
13 organization or what, which I heard in your question,
14 but certainly the information is in a more public
15 accessible point that many people can go and search
16 and find. The prices are quoted very low and
17 certainly they're going to pursue those lower prices.

18 MR. MCNAULL: I agree with Scott, and I
19 didn't mention it earlier, but more and more of our
20 customers are seeking out Chinese production directly
21 now because of the stories and things they've heard
22 around Chinese willingness to sell at extremely low
23 price.

24 MR. BERMISH: What we do know is that the
25 Chinese producers habitually talk among each other.

1 It's not the same sort of situations you have in
2 western countries. So it is quite possible, although
3 we don't know for certain that they may have said hey,
4 the U.S. market looks like a ripe market to go to and
5 let's go there.

6 As a result you've seen some pretty
7 aggressive activities on the Chinese both in terms of
8 volume and pricing.

9 MS. MAZUR: All right. Thank you very much.
10 That's very helpful. If there's anything, again, that
11 you can further elaborate on in your post-conference
12 brief with respect to why we're seeing this recent
13 push into the market by new Chinese producers.

14 It doesn't seem to be an existing supplier
15 just increasing their exports, these are new entrants,
16 so I would appreciate anything that you might have to
17 offer in post-conference. Thank you.

18 MR. CARPENTER: Again, thank you very much,
19 panel, for your presentation and your responses to our
20 questions. We're moving right along here. At this
21 point we'll take about a 10 minute break and then
22 we'll begin with the Respondents' presentation.

23 MS. BECK: Mr. Carpenter, I'm sorry. Could
24 I just add one point to your --

25 MR. CARPENTER: Sure.

1 MS. BECK: -- question about the effect of
2 nonsubject imports? You had mentioned that in the
3 sunset review the data was only available through the
4 first three quarters of 2005. Just in pulling the
5 data for full year 2005 I think what is extremely
6 telling is that the nonsubject imports were down by
7 only 20 million pounds whereas U.S. producer shipments
8 were down by close to 100 million pounds.

9 So I think you'll see with the additional
10 data for 2005, you'll see a difference from that
11 record.

12 MR. CARPENTER: Ms. Beck, is that based on
13 information within the petition or is that based on
14 the questionnaires that we've obtained in this
15 investigation?

16 MS. BECK: That is based on updated
17 questionnaire responses that we have received to
18 date --

19 MR. CARPENTER: I see. Okay.

20 MS. BECK: -- that have been received by the
21 Commission.

22 MR. CARPENTER: Thank you very much. All
23 right. We'll take a break at this point.

24 (Whereupon, a short recess was taken.)

25 MR. CARPENTER: Could we resume the

1 conference at this point, please?

2 Welcome, Mr. Marshak and Mr. Figueroa.

3 Please proceed.

4 MR. MARSHAK: Good morning. As I discussed
5 in my opening remarks, I'm going to be very brief, the
6 Petitioners and other domestic producers have
7 submitted their confidential responses to the
8 Commission's domestic producers questionnaire.
9 Whether the Commission here finds the domestic
10 industry currently is experiencing material injury
11 will be based in large part in the Commission's
12 analysis of this data.

13 In evaluating whether the industry is
14 injured we ask the Commission to follow its practice
15 of concentrating on the industry's performance in the
16 most recent full year period which is 2005. The fact
17 that this industry apparently rebounded in 2005 from
18 its relatively poor performance for 2004 in our
19 opinion constitutes evidence that there is no current
20 injury.

21 For example when you look at the
22 Commission's staff report in the sunset review the
23 unit values from January to September 2005 were 68
24 cents a pound compared to a high of 54 cents a pound
25 in 2004. So January to September 2005 were the

1 highest prices in the 21st Century.

2 Also the ratio of inventories to production
3 and shipments in January to September 2005 were the
4 lowest in the past five years. The unit labor costs
5 were the same in January to September 2005 as in 2003
6 and similar to costs in the 21st Century. Net sales
7 value increased steadily.

8 It was higher in January to September 2005
9 than in prior years. Perhaps most importantly the
10 industry's operating income is a percentage of net
11 sales. The industry was profitable at a 3.7 percent
12 rate in January to September 2005 and this was the
13 first time in history it was profitable in the 21st
14 Century.

15 For this reasons the firms with operating
16 losses -- there was only one firm with an operating
17 loss in January to September of 2005. Again, that was
18 the lowest in the 21st Century. These trends if they
19 continue for the remainder of 2005 should be
20 sufficient for the Commission to conclude that the
21 industry is not currently injured.

22 However, even if the Commission finds that
23 there is present injury the same facts when analyzed
24 in conjunction with the significant increase in
25 Chinese exports in this year reveals this injury is

1 not by reason of allegedly less than fair value sales.
2 There's no question that Chinese exports have
3 increased dramatically in 2005 from prior years.

4 You look at Petitioners' Injury Exhibit No.
5 2 and they present a dramatic increase. In 2003 and
6 2004 there were approximately 74 million pounds or 71
7 million pounds of PSF imported from China, so there
8 was a flat import supply in those two years. In 2005
9 Chinese exports took off.

10 There were 194 million pounds exported to
11 the United States. Those Chinese imports in that year
12 more than doubled as compared to the first two years
13 of the Commission's POI when import levels were flat.
14 In many cases such a dramatic increase in imports
15 would constitute a clear indicia of injury. In the
16 instant case this increase leads to the opposite
17 conclusion.

18 In the same period as Chinese imports
19 increased the domestic industry had its most
20 profitable year in the 21st Century. The direct
21 correlation between increased imports and favorable
22 industry performance affectively establishes that
23 subject imports could not have contributed to the
24 material injury which this industry may have been
25 experiencing.

1 Also significant is the fact that these
2 Chinese imports largely supplanted declining imports
3 from Korea and Taiwan. Thus Chinese imports in large
4 measure merely maintained traditional import market
5 share. As Petitioners' Injury Exhibit No. 2 reveals
6 the average unit values of the Chinese imports was at
7 a higher level in 2005 and the first quarter 2006 than
8 in the corresponding periods in 2003 and 2004.

9 Thus increased Chinese imports have not been
10 in injurious prices. It also is noteworthy that
11 certain domestic producers are themselves importers of
12 PSF. Thus the existence of imports per se does not
13 itself constitute injury to U.S. producers. Assuming
14 the Commission determines that there is no present
15 injury or no causation it will then consider threat.

16 Here, too, the fact that there was no
17 correlation between increased Chinese exports and
18 industry performance is significant. Query if the
19 2005 increase did not lead to injury then there is no
20 reason to predict that future imports will lead to
21 future injury.

22 Petitioners posit that Chinese exporters
23 have substantially increased capacity in order to
24 increase their shipments to the United States. We
25 agree capacity obviously has increased, but much of

1 the capacity already has come on stream without
2 causing present injury. Chinese producers correctly
3 project that market demand will increase significantly
4 within China in the next several years.

5 The Chinese economy as we all know is
6 growing and demand by Chinese manufacturers for PSF to
7 fill furniture, sleeping bags, comforters, pillows and
8 cushions made in China will increase in sufficient
9 quantities to justify the Chinese decision to expand
10 their capacity. In short we believe the Commission
11 should vote to end this proceeding at this time.

12 On behalf of Chinese Respondents we again
13 thank the Commission for providing us with the
14 opportunity to discuss the reasons why we believe
15 there is no reasonable indication of material injury
16 or threat. We will happy to answer any questions the
17 Commission and staff may have or to attempt to get
18 information from the clients in China.

19 Again, but please remember in the
20 preliminary determination it's a very short period of
21 time for us to prepare and it often is difficult to
22 obtain these significant information you would need or
23 that you may be able to obtain in a final
24 investigation, but we will do our best. Thank you.

25 MR. CARPENTER: Thank you, Mr. Marshak.

1 Begin the questions with Mr. Wise.

2 MR. WISE: Thank you for attending and
3 presenting here. I just have three questions. The
4 first one having to do with two of your clients. I
5 have not been served with their questionnaires with
6 respect to Xiamen Xianglu and Jiaxing Fuda Chemical
7 Fiber Companies. When will those be provided?

8 MR. MARSHAK: We will get an email out as
9 soon as this hearing is over and we'll get back to you
10 on that.

11 MR. WISE: Okay. Thank you. I appreciate
12 that. The second question has to do with the PCI
13 report submitted by the Petitioners. It presents
14 historical and forecasted figures of capacity for
15 individual Chinese companies. Could you comment on
16 (1) the reliability nature of these, and to what
17 degree can you separate certain polyester from all of
18 polyester?

19 MR. MARSHAK: I'm going to have to give you
20 the same answer. You know, once again, we're new to
21 this. We are going to get back to our clients as soon
22 as the hearing is over and again try our best to get
23 you this information. We know it's a very, very short
24 period of time for a preliminary determination.
25 Petitioners have been in this for years and we just

1 got started, but we will try our best to answer these
2 questions.

3 MR. WISE: I appreciate that. And my final
4 question has to do with the currency and valuation.
5 The yuan has strengthened 3.4 percent from January 1,
6 2003, to July 12, 2006. How has this affected the
7 prices of Chinese exports to the U.S. in respect is
8 this the increase in average unit value just a
9 mirroring of this increase in currency valuation or is
10 it other?

11 MR. MARSHAK: That's a complex question
12 which will be in our answer, hopefully will be in our
13 post-hearing brief.

14 MR. WISE: Okay. Thank you. I have no
15 other questions.

16 MR. MARSHAK: Thank you.

17 MR. CARPENTER: Mr. St. Charles?

18 MR. ST. CHARLES: I do thank you for coming
19 to testify today and I have no questions.

20 MR. MARSHAK: Thank you.

21 MR. CARPENTER: Mr. Benedetto?

22 MR. BENEDETTO: John Benedetto. Thank you
23 for coming today. I want to ask you the same question
24 I asked the first panel about the pricing products
25 which is do you think that virgin and regenerated PSF

1 compete in the market, and so that therefore I could
2 combine the data for products one and six and the data
3 for products two and seven?

4 MR. MARSHAK: Once again, we will get back
5 to our clients and try to answer that in our brief.

6 MR. BENEDETTO: Okay. Thank you. No
7 further questions.

8 MR. MARSHAK: Thank you.

9 MR. CARPENTER: Mr. Yost?

10 MR. YOST: Again, along with my colleagues
11 thank you very much for coming today, and I have no
12 further questions.

13 MR. MARSHAK: Thank you.

14 MR. CARPENTER: Mr. Clark?

15 MR. CLARK: I have no questions.

16 MR. MARSHAK: Thank you.

17 MR. CARPENTER: Ms. Mazur?

18 MS. MAZUR: Thank you for coming as well.

19 You spoke about your client's indication that there
20 will be significant market growth in China.

21 To the extent to which you can document any
22 of those assertions with respect to Chinese capacity
23 and home market shipments because we're only going to
24 be getting a slice of the Chinese industry in terms of
25 the questionnaire data, so if we're not going to be

1 able to rely on information from the PCI report if
2 that's what you suggest is there something that your
3 clients have that would provide this kind of
4 information in terms of market trends and growth and
5 in what areas?

6 MR. MARSHAK: Again, we understand the
7 necessity for the staff to have documents to prove
8 what are clients or to confirm what are clients are
9 telling us. Again, it's very hard in the preliminary
10 determination. We will try our best.

11 We hope not to see you back here for a final
12 because we hope to win now and we hope to win at the
13 Department of Commerce, but if we can't get you the
14 information now worst case scenario we definitely will
15 have the information several months from now.

16 MS. MAZUR: Whatever you can do. Anecdotal
17 information would be fine if that's all that's
18 available, but again, whatever you can do would be
19 appreciated.

20 MR. MARSHAK: Thank you.

21 MS. MAZUR: Thank you.

22 MR. CARPENTER: Again, thank you, Mr.
23 Marshak. At this point we'll take just a short break,
24 maybe about five minutes, to allow counsel from both
25 sides to prepare their rebuttal on closing statements

1 beginning with the Petitioners. Thank you.

2 (Whereupon, a short recess was taken.)

3 MR. CARPENTER: Okay. Mr. Rosenthal, please
4 proceed whenever you're ready.

5 MR. ROSENTHAL: Thank you, Mr. Carpenter. I
6 just have a few brief comments in response to Mr.
7 Marshak, and I recognize he is in a difficult position
8 and appreciate him showing up and making the arguments
9 that are available to him. Unfortunately he does not
10 have access to the data that will form the basis of
11 the record and the arguments he has made have been on
12 limited data and are simply incorrect.

13 He claims that the industry rebounded in
14 2005. That's his term, "rebounded". Well, take a
15 look at the industry performance in 2005. It lost
16 market shares as testified by Dr. Magrath
17 dramatically, over nine percent, and the meager profit
18 it was able to eek out in 2005 were something in the
19 neighborhood of less than two percent. I think it was
20 1.4 percent for the year.

21 That was the first profitable year of course
22 in several. Hardly a rebound. Of course as you heard
23 as testified to by our witnesses they were able to eek
24 out that profit by simply deciding that they could not
25 afford to compete with the Chinese prices in certain

1 accounts and thereby ceding sales and ceding market
2 share, the result being reduced capacity utilization
3 and the ultimate shut down of facilities.

4 Not exactly my definition of a rebound. He
5 cites as another example of the so-called rebound in
6 2005 the higher prices, higher values that the
7 industry was able to achieve. Yes, prices were up.
8 So were raw material costs as you heard extensively
9 discussed by our witnesses.

10 Again, rising raw material costs have been a
11 persistent problem with this industry. The fact that
12 the industry was able to eek out a modest profit in
13 2005 despite these raw material costs is not exactly
14 cause for celebration because as we saw they did that
15 at the expense of market share, lower or declining
16 capacity utilization and ultimately that strategy
17 could not be sustained as we saw in the first quarter
18 of 2006.

19 Mr. Marshak also said arguing from the
20 sunset report whose data really ended after three
21 quarters of 2005, his words were these trends if they
22 continue. Well, they didn't continue. The trends
23 weren't great to begin with and to the extent that he
24 could discern a positive trend in the first three
25 quarters of 2005, they did not continue through full

1 year 2005.

2 As we said profitability was abysmal, market
3 share was abysmal, virtually every indicator that the
4 Commission looked at in 2005 was terrible and things
5 simply got worse in 2006. So the trends that Mr.
6 Marshak was hoping were there were not and the result
7 is an industry that has been injured in 2005, and
8 suffering further injury in 2006 and facing a rather
9 bleak future because of the issues we talked about
10 earlier.

11 That is the excess Chinese capacity far
12 outstripping Chinese demand and in fact every report
13 one can find will suggest that is the case. Just to
14 respond to a question by Ms. Mazur, it is sometimes
15 hard to separate out the subject merchandise capacity
16 figures and demand figures from other polyester
17 products, and so that is one of the things that we
18 have to do our best to work with because not all the
19 sources separate certain PSF from other types of
20 polyester products.

21 Every available source does indicate excess
22 capacity such that there is no other place for the
23 production to go other than outside of China. As
24 we've heard earlier with the EC as the other major
25 market being closed that leaves the U.S. We've

1 already seen the affects of that increase year over
2 year, dramatic increases of imports from China, and
3 virtual devastation in the U.S. market.

4 There is no question that this case argues
5 for an affirmative determination and we hope that the
6 Commission will issue that not just preliminarily, but
7 when we get to the final as well. Thank you.

8 MR. CARPENTER: Thank you, Mr. Rosenthal.
9 Mr. Marshak?

10 MR. MARSHAK: Again, on behalf of Chinese
11 Respondents I thank you, again, for allowing us to
12 present our case. I just want to make two very simple
13 points.

14 One, maybe I'm being too simplistic, but if
15 the domestic industry has its best performance in a
16 year when there's the largest Chinese import
17 penetration it seems that there's no direct
18 correlation between Chinese imports and the
19 performance of the industry. If there's no direct
20 correlation there shouldn't be material injury.

21 Second, on threat I know we're going to try
22 to document this, but there is no question that the
23 Chinese economy is growing, that demand in China for
24 this product is increasing and that you're going to
25 see a lot more cushions, and furniture and sleeping

1 bags produced in China and used in China as the
2 Chinese market increases, and as the Chinese economy
3 grows and the Chinese consumers get the same
4 advantages as the United States consumers get.

5 Thank you very much.

6 MR. CARPENTER: Thank you, Mr. Marshak.

7 On behalf of the Commission and the staff I
8 want to thank the witnesses who came here today as
9 well as counsel for sharing their insights with us and
10 helping us develop the record of this investigation.
11 Before concluding let me mention a few dates to keep
12 in mind.

13 The deadline for both the submission of
14 corrections to the transcript and for briefs in the
15 investigation is Wednesday, July 19. If briefs
16 contain business proprietary information a public
17 version is due July 20. The Commission has
18 tentatively scheduled its vote on the investigation
19 for August 7 at 11:00 a.m. and will report its
20 determination to the Secretary of Commerce later that
21 day.

22 Commissioners' opinions will be transmitted
23 to Commerce on August 14. Thank you for coming. This
24 conference is adjourned.

25 //

1 (Whereupon, at 11:34 a.m., the preliminary
2 conference in the above-entitled matter was
3 concluded.)

CERTIFICATION OF TRANSCRIPTION

TITLE: Certain Polyester Staple Fiber
from China

INVESTIGATION NO.: 731-TA-1104 (Preliminary)

HEARING DATE: July 14, 2006

LOCATION: Washington, D.C.

NATURE OF HEARING: Preliminary conference

I hereby certify that the foregoing/attached transcript is a true, correct and complete record of the above-referenced proceeding(s) of the U.S. International Trade Commission.

DATE: 7/14/06

SIGNED: LaShonne Robinson
Signature of the Contractor or the
Authorized Contractor's Representative
1220 L Street, N.W. - Suite 600
Washington, D.C. 20005

I hereby certify that I am not the Court Reporter and that I have proofread the above-referenced transcript of the proceeding(s) of the U.S. International Trade Commission, against the aforementioned Court Reporter's notes and recordings, for accuracy in transcription in the spelling, hyphenation, punctuation and speaker-identification, and did not make any changes of a substantive nature. The foregoing/attached transcript is a true, correct and complete transcription of the proceeding(s).

SIGNED: Carlos Gamez
Signature of Proofreader

I hereby certify that I reported the above-referenced proceeding(s) of the U.S. International Trade Commission and caused to be prepared from my tapes and notes of the proceedings a true, correct and complete verbatim recording of the proceeding(s).

SIGNED: Tammy Brodsky
